

# QG-Getting Started with Windows 11 on the SHC6400

Initial setup of the SHC6400 and Windows 11

# Getting Started

- When you use your SHC6400 tablet for the first time, you will set up Windows 11 and create a user account for either work/school, personal use or create a local account offline.
- **Work or school:**
- Use this type of account for organizations.
- It has more advanced security and compliance tools to protect sensitive organization data and provides access to Microsoft 365 for business and other business Microsoft applications.
- With a work or school account, you need an internet connection and must create or sign in to a Microsoft account.
- Select Set up for work or school.
- Tap Next.
- Create or sign in to your work or school Microsoft account.
- Follow the setup prompts.

# Getting Started

- **Personal Use:**

Use this type of account for personal use. It allows you to connect to Microsoft apps, services, and devices, including Outlook.com, OneDrive, Microsoft Edge, and Microsoft 365.

With a personal account, you can choose whether to create a local account, which doesn't require an internet access, or connect to a Microsoft account.

## **Set Up Windows 11 for Personal Use**

- Select Set up for personal use.
- Tap Next.
- Create or sign in to your Microsoft account.
- Follow the setup prompts.

# Getting Started

**Local Account:** Local user accounts are defined locally on a device and do not require an association to a Microsoft account.

A local account may be useful if you share the SHC6400 tablet with multiple users or use the tablet entirely offline.

## **Set up the tablet with a local account:**

Make sure you don't have a SIM card installed in the SHC6400.

Select Set up for personal use.

At the prompt "Let's connect you to a network," tap I don't have internet.

Note: If this option isn't available, see Using OOBE Bypass.

Tap Continue with limited setup.

Tap Accept.

Enter your name and tap Next.

Create a password and tap Next.

Note: To set up the tablet without a password, leave the field blank and tap Next.

# Using OOB E Bypass

If you reset the tablet or have an older OS build, the option to set up without the internet may not be available.

You can use the `OOBE\bypass` command to reboot the tablet and change the setup options.

## To use OOB E bypass,

- Connect a USB keyboard to the SHC6400.
- At the "Let's connect you to a network" screen, press Shift+F10.
- A command line opens.
- Tap in the command line, and type `oobe\bypassnro`.
- Press Enter.
- The SHC6400 tablet reboots.
- Now when you set up Windows 11, you will have the option to set up a local account without the internet.
- Follow the steps to set up a local account.

# Initial Windows Updates

- **Allow initial updates and background tasks to complete**
- Upon first set up, Windows will be running many finalization background processes, even after you've made it to the Windows home screen.
- For more information regarding Windows and device system updates please review the following guides.
- SHC6400 Device systems and Windows updates
- SHC6400 Setting Active Hours for Windows updates
